

# Networks in Archaeological research

08 -13th october  
2018

Ranging from exchange to urban networks, interactions systems are a basic component of every society, from the prehistoric to the modern. The Research School 'MOSAICnet aims at bringing together young and senior researchers around this trans-disciplinary issue of networks. The Research School offers the state of the art of several methodological approaches (such as Social Network Analysis, Spatial Network Analysis, etc.), resulting from the dialogue between the Human and the Exact Sciences. It also intends to discuss their contributions to the research on past social, cultural and economic interactions.

**MOSAICnet**  
Research School AOROC-Bibracte 4

**Organised by :** Oliver Nakoinz, Katherine Gruel, Vincent Guichard, Clara Filet and Franziska Faupel
